Art Unit: 2144

UNITED STATES PATENT AND TRADEMARK OFFICE

COMMISSIONER FOR PATENTS
UNITED STATES PATENT AND TRADEMARK OFFICE
WASHINGTON, D.C. 2023I
vww.uspto.gov

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
- I. Claims 1-3, drawn to an apparatus for providing inter-processor communication using transmission control protocol/Internet protocol in a communication system, classified in class 709, subclass 251.
- II. Claims 4-16, drawn to a system providing inter-processor communication using transmission protocol with an accessing network controller, a wide area switching, a data location register management system coupled to Ethernet network, classified in class 709, subclass 220.
- 2. Inventions I, II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable.

In the instant case, invention I has separate utility such as an apparatus for providing inter-processor communication transmission control protocol/Internet protocol in a communication system with an Ethernet interface between an Ethernet device driver and an inter-processor to determining a type of a received message, transmitting message in non-frame data, queuing message with first and second mailbox, but lacks of a system providing inter-

Application/Control Number: 10/645,522 Page 3

processor communication using transmission protocol with an accessing network controller, a wide area switching, a data location register management system coupled to Ethernet network, forming operation, state, subscriber, authentication for a 1x evolution-data only (1xEV-DO) subscriber and forming a matching function with access network transceiver system for a packet data service, and performing call processing corresponding to 1x evolution-data only (1xEV-DO) management, classified in a different Class/Subclass. Invention II has separate utility such as a system providing inter-processor communication using transmission protocol with an accessing network controller, a wide area switching, a data location register management system coupled to Ethernet network, forming operation, state, subscriber, authentication for a 1x evolution-data only (1xEV-DO) subscriber and forming a matching function with access network transceiver system for a packet data service, and performing call processing corresponding to 1x evolutiondata only (1xEV-DO) management, but lacks an apparatus for providing inter-processor communication transmission control protocol/Internet protocol in a communication system with an Ethernet interface between an Ethernet device driver and an inter-processor to determining a type of a received message, transmitting message in non-frame data, queuing message with first and second mailbox\], classified in a different Class/Subclass. See MPEP § 806.05(d).

- 3. The inventions are distinct for reasons given above, and the search required for each Group is different and not co-extensive for examination purposes. For example, the searches for the three inventions would not be co-extensive because these Groups would require different searches on PTO's classification class and subclass as following reasons:
 - (a) These invention have acquired a separate status in the art as shown by their

Application/Control Number: 10/645,522

Art Unit: 2144

different classifications.

(b) The search required for each Group is different and not co-extensive for examination purposes.

For example, the searches for the three inventions would not be co-extensive because these Groups would require different searches on PTO's classification class and subclass as following:

The Group I search (claims 1-10) would require use of search Class 709, subclass 251 (which would not be required for invention II).

The Group II search (claims 11-15) would require use of search Class 709, subclass 220 (which would not be required for the invention I).

For the reasons given above restriction for examination purposes as indicated is proper.

- 4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement may be traversed (37 CFR 1.143).
- 5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
- 6. Applicant is reminded that the required for response to this requirement is <u>30</u> days, not one month.

Application/Control Number: 10/645,522

Art Unit: 2144

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tammy T. Nguyen whose telephone number is 571-272-3929. The examiner can normally be reached on Monday - Friday 8:30 - 5:30.

Page 5

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, *William Vaughn* can be reached on 571-272-3922. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300. Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
